

DECK-O-SEAL NEWS

Is your deck too salty for your taste?

Salt generators are fast replacing traditional chlorine systems in today's pools. What's good for your pool may not be good for your deck. Concerns have been raised about the effect the salt generators have on natural stone and/or the concrete surfaces surrounding your pool.

DECK-O-SEAL® has developed a complete deck preservation system that will help protect your deck system from the ingress of salt and help stop the unsightly "white" stains that can be left on your deck from over splash in a pool system containing a salt generator.

The DECK-O-SEAL system allows you to protect your deck from the salt while at the same time offering you a natural look. The DECK-O-SEAL system can be used on new or existing decks.

At the heart of the DECK-O-SEAL deck preservation system is DECK-O-SHIELD™, a waterborne, environmentally friendly, ready to use sealer and water repellent, designed specifically for use on natural stone, concrete or tile surfaces. Once applied to a structurally sound, crack free

surface, DECK-O-SHIELD provides the first line of defense by repelling the water and the salt, limiting its penetration. DECK-O-SHIELD has been specifically formulated for the pool industry and is designed to protect all your natural stone, concrete, or tile surfaces, including waterfall and copings.

DECK-O-SHIELD can be left on its own to defend your deck, leaving a natural, unaltered look or, if you desire, a DECK-O-SHIELD treated surface can be over coated with DECK-O-GRIP®.

DECK-O-GRIP will work in tandem with DECK-O-SHIELD to further protect your deck from the ingress of water and salt, while at the same time enhancing your decorative surface's natural color. DECK-O-GRIP will also increase the slip resistance of your deck's surface.

PROTECTING YOUR INVESTMENT IS AS EASY AS 1...2...3 with the DECK-O-SEAL deck rejuvenation and protection system.
